Villivakkam, Chennai - 600049.

Dear Hiring Manager,

I am writing to apply for the DevOps Engineer position at your organization. With 3 years and 3 months of experience in cloud engineering and DevOps at Tata Consultancy Services (TCS), I have contributed to large-scale projects in both Azure and AWS environments, focusing on automation, migration, and infrastructure modernization.

During my engagement with AXA UK, I led cloud migration initiatives, modernizing legacy applications and databases into Azure PaaS and SaaS solutions. I developed over 15 Azure Data Factory pipelines, automated deployments with ARM templates and YAML, and migrated applications to Azure PaaS—reducing technical debt by 40%. I also transformed Windows Services into Azure Function Apps, cutting operational costs by 35% while improving scalability.

Currently, with the AXA Belgium DevOps Team, I support hybrid-cloud operations with a strong emphasis on AWS infrastructure and security. My responsibilities include managing SSL/TLS renewals, patching, and tagging across 50+ servers, as well as implementing proactive monitoring to ensure compliance and audit readiness. These experiences have strengthened my expertise in cross-cloud DevOps practices, security governance, and automation.

I am excited about the opportunity to bring this blend of Azure and AWS expertise, automation skills, and problem-solving mindset to your team. I am confident that my background in cloud migration, CI/CD pipeline development, and governance would allow me to contribute effectively to your organization's goals.

Thank you for considering my application. I would welcome the chance to discuss how my skills and experience can add value to your team.

Sincerely,

Bala Pramoth C M
